

Foundation Stage

Key Vocabulary: sharing, halving, number patterns, equal

		5.	Dividend Quotient
Objective & Strategy	Concrete	Pictorial	Abstract
To begin to divide by sharing.	Children will use a range of resources to share concrete resources to begin to demonstrate understanding.	Children will understand equal groups and share items out in play and problem solving.	
	Children will start with an even number and will need to share this out equally in a given group. e.g. 10 ÷ 2 = 5	Step 1: Count how many you have. Step 2: Share them equally so each group has the same amount. Step 3: Count how many are in each group.	

Year 1

Key Vocabulary: division, dividing, grouping, sharing, doubling, halving, array, number pattern, equal grouping, equal sharing

y :_aivision, aiviaing, grouping, snaring, aoubiing, naiving, array,	number pattern, equal grouping, equal sharing	Divisor Quotient
Concrete	Pictorial	Abstract
Children will use concrete resources, including uni-fix cubes to share into equal groups. Children will also be able to half a number up to 20 by sharing into equal groups.	Children will draw jottings and have pictorial representations to demonstrate knowledge of sharing into equal groups.	Children will be introduced to word problems to solve division problems.
	12 ÷ 2 = 6	6 sweets are shared between 2 people. How many do they have each?
		12 ÷ 2 = 6
	I know there are 2 groups and in each group there are 6 flowers.	<u>Stem Sentence:</u> I know <u>12</u> divided equally between <u>2</u> groups' equals <u>6.</u>
	12 ÷ 2 = 6	
	12	
<u>Stem Sentence:</u> I know there are <u>2</u> groups so I can share <u>12</u> counters which will equal <u>6</u> in each group.		
	Concrete Children will use concrete resources, including uni-fix cubes to share into equal groups. Children will also be able to half a number up to 20 by sharing into equal groups. Stem Sentence: I know there are 2 groups so I can share	Children will use concrete resources, including uni-fix cubes to share into equal groups. Children will also be able to half a number up to 20 by sharing into equal groups. Children will draw jottings and have pictorial representations to demonstrate knowledge of sharing into equal groups. 12 ÷ 2 = 6 I know there are 2 groups and in each group there are 6 flowers.

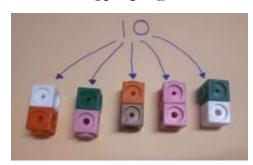

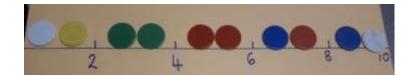

To divide by grouping.

Children will begin to solve division problems, which require sorting objects and quantities into 2s, 4s, 5s and 10s.

Children will use concrete resources such as cubes, counters or objects to aid understanding.

 $10 \div 5 = 2$

Children will use number lines to show grouping.

 $10 \div 2 = 5$

Children will also experiment dividing by grouping using the bar model.

The children will be given a number or picture representatives. This will represent the whole. They then need to split the whole into the number of groups they are dividing by and work out how many would be in each

e.g.
$$10 \div 5 = 2$$

There are 10 flower bulbs. Plant 2 in each pot. How many pots are there?

$$10 \div 2 = 5$$

There are 10 flower bulbs. Plant 5 in each pot. How many pots are there?

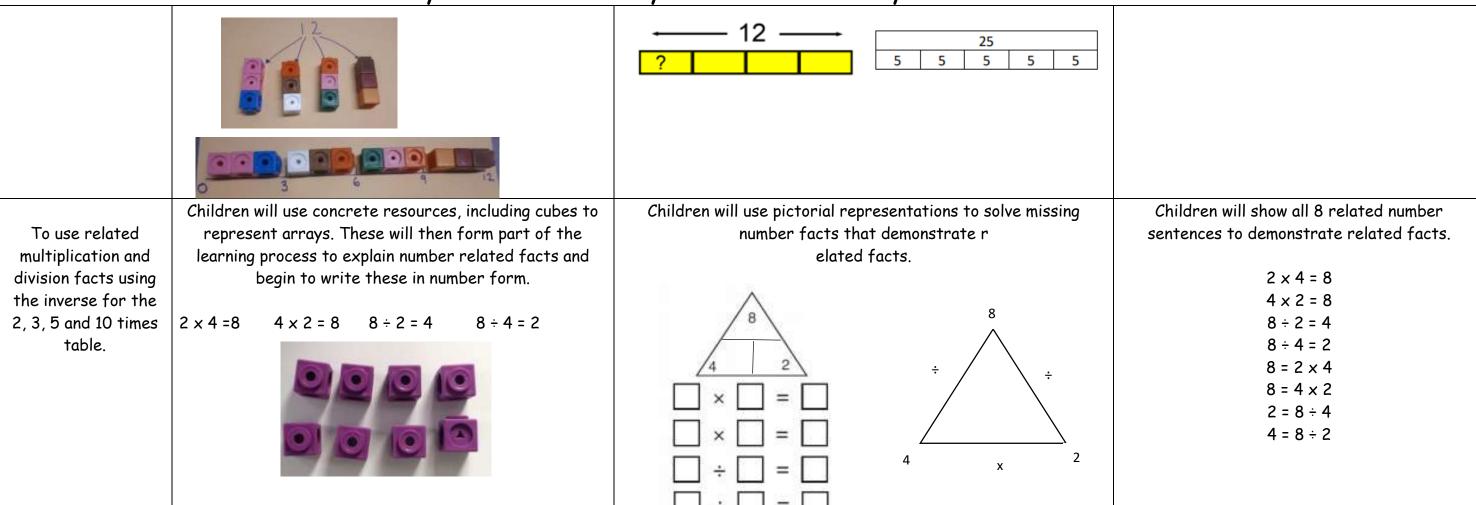

Year 2

<u>Key Vocabulary:</u> multiplication, multiply, multiplied by, multiple, grouping, doubling, array, row, column, groups of, times once, twice, three times ... ten times, repeated addition, one each, two each, three each ... ten each, equal groups of, sharing circles, shared by, multiplication table, multiplication fact.

To divide by sharing.	Children will use a range of concrete resources, including cubes to share objects and quantities into equal groups. I have 12 cubes, can you share them equally into 3	Children will use pictures and shapes to share quantities. 12 ÷ 3 = 4	Children will be writing division number sentence using the divide symbol. 12 ÷ 3 = 4
	groups?		12 ÷ 4 = 3
		Children will also be able to use the bar model to show and support their understanding. e.g. 12 ÷ 4 = 3	
To divide by grouping	Children will begin to solve division problems, which	Children will use number lines to show grouping	12 shared by 3 equals 4
(repeated addition)	require sorting objects and quantities into 2s, 4s, 5s and 10s. Children will use concrete resources such as cubes,	0 1 2 3 4 5 6 7 8 9 10 11 12	There are 12 flower bulbs. Plant 3 in each pot. How many pots are there?
	counters or objects to aid understanding.	Children will dividing by grouping using the bar model.	12 ÷ 3 = 4
		The children will be given a number or picture representatives. This will represent the whole. They then need to split the whole into the number of groups they are dividing by and work out how many would be in each.	There are 12 flower bulbs. Plant 4 in each pot. How many pots are there? 12 ÷ 4 = 3

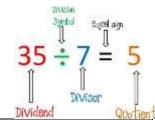

Year 3

Ryhall CE Academy Calculation Policy- DIVISION

<u>Key Vocabulary:</u> groups of times, repeated addition, division, dividen, divided by, divided into left, left over, remainder grouping sharing, share, share equally one each, two each, three each ... ten each group in pairs, threes ... tens equal groups of, halving, array row, column, number patterns, division fact

Objective	Concrete	Pictorial	Abstract Dividend Quotie
	Children continue to deepen their understanding of the link between multiplication and division and use physical objects to find related facts.	Children represent an array pictorially then find the associated multiplication and division facts by sorting into equal groups.	Children apply their understanding of inverse relationships to write related multiplication and division statements.
To recall multiplication and division facts for multiplication tables up to 12x 12.	3 x 6= 18 18 ÷ 3 = 6 6 x 3 = 18 18 ÷ 6 = 3	18÷3=6 3×6=18 6×3=18	$3 \times 6 = 18$ $6 \times 3 = 18$ $18 = 6 \times 3$ $18 \div 3 = 6$ $18 \div 6 = 3$ $18 \div 6 = 3$ $18 \div 6$ They use associated vocabulary correctly and know what each number represents in the calculation. The value of
To using grouping to divide (repeated addition)	Children will use concrete resources, including place value counters to divide by grouping. 96÷8=12 Step 1: Use place value counters to create the dividend.	Children will continue to use repeated addition on the number line but will work with increasingly large numbers.	There are 96 footballs. Each player needs 8 footballs. How many players are there? 96 ÷ 8 = 12
	Step 2: Look at the divisor, this explains the number of	96 ÷ 8 = 12 Children will count on from in 8s from 0 until they reach 96.	There are 96 footballs. Each player needs 12 footballs. How many players are there?
	groups you will need. E.g. 8. The children will need to exchange 1 ten for 10 ones.	0 8 16 24 32 40 48 56 64 72 80 88 96	96 ÷ 12 = 8
		Children will also continue to use the bar model to support their understanding.	How many groups 8 are in 96? How many groups of 12 are in 96?
	Step 3: Children will need to share out the remaining number so each group is equal.	96 ?	riow many groups of 12 are in 50.

	17/14/1 92 /10440111	dalcaration only biving	
To use arrays to	Children will link division to multiplication by using arrays.	Children will draw or be given a pictorial	Children will find the inverse of multiplication and

	Children use physical objects to create arrays to support their understanding of factors.	Children investigate finding all factors of a number by drawing arrays.	multiplier multiplicand product dividend divisor quotient $3 \times 6 = 18$ $18 \div 3 = 6$ number number in number number number number number in of groups each group in all in all of groups each group Children use their knowledge of multiplication and division facts to find factors of numbers.
To recognise and use actor pairs and commutativity in mental calculations.	Factors of 24	1x 24 3x8 The factors one 1,2, 3, 4, 6, 8, 12 and 24.	Factors of 24 1 × 24 = 24 2 × 12= 24 3 × 8 = 24 4 × 6 = 24

To use a formal written method of short division

2/3 digit ÷ 1 digit number (exact answers- no remainders)

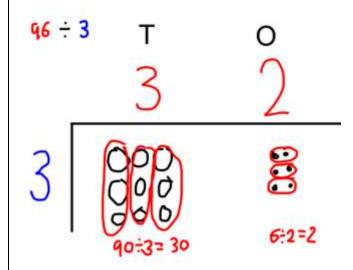

2 or 3 digit divided by a 1 digit number (simple remainders) Children represent division calculations using concrete materials such as base 10 and place value counters.

The children partition the dividend and put inside the bus stop then divide each part by the divisor. The quotient is then recorded on the top line.

They begin to explore calculations involving simple remainders.

 $98 \div 3 = 32 r2$

Children represent division calculations using informal jottings and pictorial representations.

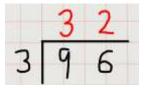

They begin to explore calculations involving simple remainders.

$$98 \div 3 = 32 \text{ r2}$$

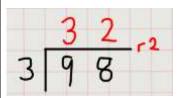

In Year 4 children divide numbers up to 3 digits by a 1 digit numbers with exact answers.

The children are introduced to the bus stop method as a formal written method.

Once children have a secure understanding, they begin to understand how to record calculations with simple remainders.

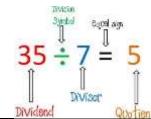

Children apply their knowledge of division to word problems.

Arron has 77 seeds. He plants 4 seeds in each plant pot. How many pots does he need?

Year 5

Key Vocabulary: factors, multiples, groups of, share, share equally, equal groups, division, divided by, divided into, left, left over, remainder, array, prime numbers, composite numbers.

		The common factors are 1, 2, 3 and 6.	
To establish whether a number up to 100 is prime and recall prime numbers up to 19.	Children find prime numbers and composite (non-prime numbers) by using arrays. They understand that composite numbers form arrays and prime numbers cannot be arranged into arrays. Children find prime numbers and composite (non-prime numbers cannot be arranged into arrays and prime numbers cannot be arranged into arrays.	Children use jottings and pictorial representations to investigate composite and prime numbers. Prime Numbers	Children use their knowledge of multiples and factors to find the prime numbers up to 100. They eliminate numbers that have factors other than 1. They can recall all prime numbers up to 19.
To use a formal written method of short division (bus stop method). Larger numbers ÷ 1 digit number (involving remainders)	then recorded on the top line. The children work with numbers that involve remainders.	Children represent division calculations using informa jottings and pictorial representations. The children will recognise remainders. 98 ÷ 7= 14 98 ÷ 7 T O	with calculations involving remainders. The children continue to use the bus stop method as a formal method of written calculation. 98 ÷ 7 becomes 432 ÷ 5 becomes 1 4 7 9 8 Answer: 14 Answer: 86 remainder 2 Children are expected to interpret non-integar answers by expressing results as fractions (432÷5 = 86 $\frac{2}{5}$), decimals (432:5 = 86.4) or by regarding (432:5 = 86.4 or 86 ayyouts)
	432÷5 = 86 r2 432÷5 H T O 6 6 r2 5 Lett 43 lett 32 r2	$432 \div 5 = 86 \text{ r2}$ $432 \div 5 H T O$ $6 6 6 6 6 6 6 6 6 6 $	Children apply their knowledge using word problems and number puzzles. Sharon buys a pack of 24 cans of lemonade for £6. How much does each can cost? Write the missing number. = 3.5

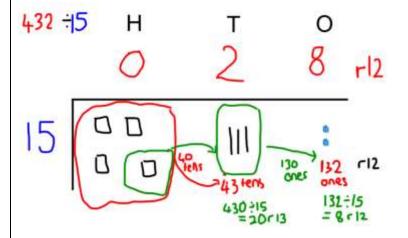

To use a formal written method of long division Divide larger numbers ÷ 2 digit numbers (involving remainders)

Children represent division calculations using concrete materials such as base 10 and place value counters.

The children partition the dividend and put inside the bus stop then divide each part by the divisor. The quotient is then recorded on the top line.

Children represent division calculations using informal jottings and pictorial representations.

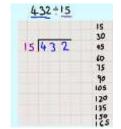

Write the missing number in each calculation.

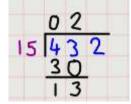

The children use the bus stop method as a formal method of written calculation. They use their understanding of the pictorial and concrete stages to understand the value of each number.

$$432 \div 15 = 28 \text{ r}12.$$

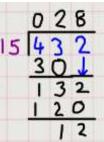

Step one: Children will put the calculation into the grid and list their multiples of the divisor.

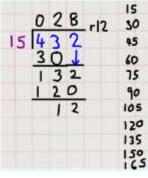

Step 2: Start with the hundreds. The divisor doesn't divide into 4 so combine the 4 hundred with the 3 tens (430). Use the multiples of 15 to calculate the nearest multiple. Two \times 15 is 30. Record this underneath, put the 2 on the top then subtract.

Step 3: The divisor does divide into 13 so combine the 13 tens with the 2 ones (132). Use the multiples of 15 to calculate the nearest multiple. 8×15 is 120. Record this underneath, put the 8 on the top then subtract.

Step 4: The number left is your remainder, record this with your answer $432 \div 15 = 28 \text{ r}12.$

Children are expected to interpret non-integar answers by expressing results as fractions (432÷15 = $28^{\frac{12}{15}}$ = $28^{\frac{4}{5}}$), decimals (432÷15 = 28.8) or by rounding (432÷15 = 28.8 \approx 29 cars) according to the context.
